CONCEPTUAL AND METHODOLOGICAL NOTES

Basic Information

INDEC foreign trade statistics are based on the customs declaration forms that register imports and exports of goods.

Since 1995, complementary sources of information have been incorporated because of the lack of customs declaration forms regarding certain exports and imports transactions which should be included in the foreign trade statistics; this is the case of trade on electrical energy by binational entities such as Salto Grande, Yaciretá and others.

The customs declaration forms are registered in an interactive entry system which controls the validity of the data, and allows to detect not received documentation in order to claim them to the customs.

Statistics Coverage

The primary objective of the official statistics on ARGENTINE FOREIGN TRADE is to measure the change in the stock of material resources of the country resulting from the movement of merchandises into or out Argentina.

The transactions can be classified into two main groups: ordinary and of special treatment.

In ordinary transactions importers and exporters receive or send merchandises through usual change operations and have no transportation peculiarities. These operations are included in the statistics and are classified since 1995 according to the MERCOSUR Common Nomenclature also based on the Harmonized System.

There are some transactions of special treatment which are also included in the statistics such as:

- samples
- donations
- temporary admission of goods for processing
- no tangible objects as natural gas or electricity

Special treatment transactions excluded from statistics are:

- goods consigned by the government to their representatives abroad
- monetary gold
- luggage and personal belongings of international passengers

- goods in transit
- military goods
- trade between the continental Argentine territory and Tierra del Fuego Special Customs Area.

COMMERCIAL SYSTEM

The national compilation of the international merchandise trade statistics is based on the special system (except electricity and trade between the continental territory and the Special Customs Area) by which imports and exports are registered on their way through customs, according to the United Nations Statistical Office definition. On the contrary, those countries which use the general trade system, register the transactions when goods cross the boundary of the national territory. This concept implies that the statistical frontier coincides with the geographic limits of the country, while for the special system the statistical border is the customs frontier.

STATISTICAL PERIOD

For the compilation of imports, the statistical period corresponds to the dispatch time independently from the arrival of the merchandises to the country; at the same time, exports are registered according to the final load for shipment date.

VALUES

The value assigned to exports is FOB-type value (free on board), on the port or loading place of the merchandises. It means that the transaction price also includes the cost to deliver goods to the port or loading place.

The imports are registered on a CIF-type basis, although it is also available information on imports FOB valued. The CIF value includes the FOB value plus the freight and insurance (duties are excluded) to deliver the merchandise from the port or loading place, to the first port or place of arrival in Argentina.

The values expressed in different currency from american dollars are converted to that currency according to the monthly average exchange rate, elaborated by the Banco de la Nación Argentina (buyer for the exports, seller for the imports).

TRADING PARTNER

Imports can be classified according to the country of consignment or origin. The definitions recommended by the Customs Cooperation Council are:

Country of consignment is the place "from which merchandises were initially dispatched to the importer country with no commercial intermediaries".

Country of origin is the place "from which merchandises have been produced or manufactured according to the established criteria to apply the customs tariffs, quantity restrictions or any other trade related measure".

Traditionally, INDEC has published imports data according to the consignment country. Starting in 1995, the country of origin is officially used to define the Argentine imports partner country, even when the information according to the country of consignment will continue being elaborated. Data according to the country of origin is available from 1987. Exports are classified according to the country of destination.

Country of destination is the place "declared at the moment of shipment as the country where finally merchandises will be delivered".

For the imports and exports statistics, data by country are grouped in two different manners: by continent or by a specific economic area.

Since January 2001, the INDEC has introduced a metodological change in the registration of foreign trade statistics in response to the relevant international recommendations. These changes will contribute to the harmonization of economic statistics and the improvement of their international comparability.

The implemented changes apply only to the foreign trade operations in customs-free zones. In the former system of special registration, applied until 2000, imports included the goods passing from customs-free zones to the customs controlled territory. Under the current system the goods are registered upon their entrance to the free zones. Similarly, in the former system exports included the goods leaving customs controlled territory and entering the free zones. With the current system, the goods are registered as exports when they leave the free zone bound for a foreign destination.

This decision applies to foreign trade statistics since 1997, when the first customs-free zones started operating in Argentina. For this reason, as previously announced, the INDEC will inform in its yearly publication, "Comercio Exterior Argentino", year 2000, the corrections covering the Argentine foreign trade for 1997-1999.

As from the month of January, 2004, exports and imports performed under the courier regime have been included.
